RSM IAAS SOLUTION

Our flexible Infrastructure as a Service platform demystifies the cloud while you retain control of your data

With RSM IaaS, you get the best of all options, a tailored solution consisting of the most advanced technologies, all on your terms and with a trusted partner.

The cloud is emerging as a key tool for organizations to access modern technology, refocus resources toward the core competency of the business and increase storage capacity. Some organizations have migrated some of their data to the cloud, while others are uncomfortable with the concept or have not yet considered it as an option. Leveraging the cloud is becoming a necessity, and you must find the right provider to implement solutions that fit your needs at your desired pace.

RSM’s Infrastructure as a Service (IaaS) solution delivers an integrated, secure platform of technology resources, complemented by storage and networking capabilities. RSM IaaS provides you with the hardware, storage, networking and other services you need to enhance your operations without worrying about buying, managing or maintaining equipment. We work with best-in-class technology providers to deliver the right combination of resources for your unique business needs, all with a consistent monthly cost.

With RSM IaaS, you can dramatically improve connectivity, storage and network capacity in a highly flexible, scalable and sustainable way. We also understand that migrating your infrastructure is a significant step, and one that needs to be taken at your speed. We offer solutions that move some or all of your IT infrastructure to the cloud through public, private and hybrid cloud deployments. From a regulatory and security perspective, RSM IaaS is delivered to you from SSAE 16, Tier 3 data centers designed to align with requirements and real-world best practices.

A comprehensive, customized infrastructure solution

The business world changes rapidly, and your technology must adapt to keep pace and establish a competitive advantage. RSM IaaS is designed for organizations that need:

• Help managing their data center or back-end computing resources for evolving IT needs including:
  - Additional technology
  - Scalability and flexibility
  - Agility
  - Reliability
  - Additional IT staff competencies
• All the capabilities of advanced technologies without the effort and risk of yet another significant hardware refresh and substantial capital investment that may accompany it
• A reliable and cost-effective transport to their data center
• A higher level of compliance than what is available from a traditional on-premise solution

Flexible, scalable cloud solutions

We understand that one size does not fit all. And unlike on-premise platforms, RSM IaaS can rapidly scale to meet your growing storage needs without the inconvenience and downtime of replacing servers. We work closely with you to design flexible solutions that meet your current business needs and adapt to future growth. RSM can deliver a full range of IaaS solutions, including consulting, implementation or support, or the specific service offerings of your choice.
You can simply select an introductory service to test the waters of a cloud deployment or choose any offering within our spectrum of services:

- RSM IaaS
- Private cloud
- Colocation and hybrid cloud
- Public cloud

Each of these services has the option to expand to our robust fully-managed services offering, RSM IT-Vision™. In addition, because every business challenge does not require the same solution, a host of add-on services helps tailor your IaaS platform to your specific needs.

**Increased functionality, same level of control**

Many organizations fear a move to the cloud will result in losing control of data and systems; however, you are not losing any control in an IaaS implementation. With RSM's IaaS platform, you turn the connectivity and hardware over, while retaining absolute power over your infrastructure. The deployment is a step forward in technology and functionality without taking on a significant amount of risk.

**Ongoing guidance and support**

RSM will provide you with continuous on-site guidance and design services throughout your entire journey to IaaS and the cloud. We'll be alongside you every step of the way even after your implementation, to help adapt your platform to fit your evolving needs. We deliver support the way you want it, whether it's online, via email or with 24/7 live support.

**Experience the power of being understood**

RSM's IaaS solution is built upon best practices developed over the last 30 years consulting, delivering and monitoring technology. We understand your concerns and your challenges, and offer the flexibility to deliver the right combination of resources for your unique needs. With RSM IaaS, you have the option to add only the services that make sense for your organization.

Unlike some providers, our national reach and local resources mean that we meet personally with you, evaluate your goals and design a platform to optimize performance while minimizing risk. If you are nervous about the location of your data, our nationwide data center options allow you to use a facility close to your location. We understand where you are and how to help you get where you want to be — in a new comfort zone with enhanced technology resources.
