Is it time to declare your financial independence?

No matter how much money you have or which life stage you’re in, becoming financially independent starts with a dream. Your dream might be to finally pay off the mountain of debt you’ve accumulated, or to stop relying on someone else for financial support. Or perhaps your dream is to retire early so you can spend more time with your family, travel the world or open your own business. Financial independence, however you define it, is freedom from the financial obstacles that are keeping you from living life on your own terms.

Envision the future

If you were to become financially independent, what would change? Would you spend your time differently? Live in another place? What would you own? Would you work part time? Ultimately, you want to define how you choose to live your life. It’s your dream, so there’s no wrong answer.

Work at it

Unless you’re already wealthy, you may have had moments when winning the lottery seemed like the only way to become financially secure. But your path to financial independence isn’t likely to start at your local convenience store’s lottery counter.

Though there are many ways to become financially independent, most of them require hard work. And retaining wealth isn’t necessarily easy, because wealth may not last if spending isn’t kept in check. As income rises, lifestyle inflation is a real concern. Becoming—and remaining—financially independent requires diligently balancing earning, spending and saving.

Earn more, spend wisely and save aggressively

Earn more. The bigger the gap between your income and expenses, the quicker you will become financially independent, no matter what your goal is. The more you can earn, the more you can potentially save. This might mean finding a job with a higher salary, working an extra job or working part time in retirement. And a job is just one source of income. If you’re
resourceful and able to put in extra hours, you may also be able to generate regular income in other ways—for example, renting out a garage apartment or starting a side business.

Spend wisely. Look for opportunities to reduce your spending without affecting your quality of life. For the biggest impact, focus on reducing your largest expenses—for example, housing, food and transportation. Practicing mindful spending can also help you free up more money to save. Before you buy something nonessential, think about how important it is to you and what value it brings to your life so that you don’t end up with a garage or attic filled with regrettable purchases.

Save aggressively. Set a wealth accumulation goal and then prioritize saving. Of course, if you have a substantial amount of debt, saving may be somewhat curtailed until that debt is paid off. Take simple steps such as choosing investments that match your goals and time frame, and paying yourself first by automatically investing as much as possible in a retirement savings plan. Time is an important ally in the quest for financial independence, so start saving as early as possible and build your nest egg over time. (Note that all investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.)

Keep going

Make adjustments. Life changes. Unexpected bills come up. Some years will be tougher financially than others. Expect to make some adjustments to your plan along the way, especially if you have a long-term time frame, but keep going.

Track your progress. Celebrate both small milestones and big victories. Seeing the progress you’re making will help you stay motivated as you pursue your dream of financial independence.

CHARITABLE GIVING AFTER TAX REFORM

Tax reform changes to the standard deduction and itemized deductions may affect your ability to obtain an income tax benefit from charitable giving. Projecting how you’ll be affected by these changes while there’s still time to take action is important.

Income tax benefit of charitable giving

If you itemize deductions on your federal income tax return, you can generally deduct your gifts to qualified charities. However, many itemized deductions have been eliminated or restricted, and the standard deduction has substantially increased. You can generally choose to take the standard deduction or to itemize deductions. As a result of the changes, far fewer taxpayers will be able to reduce their taxes by itemizing deductions.

Taxpayers whose total itemized deductions, other than charitable contributions, would be less than the standard deduction (including adjustments for being blind or age 65 or older) generally have less of a tax savings incentive to make charitable gifts. For example, assume that a married couple, both age 65, have total itemized deductions (other than charitable contributions) of $15,000. They would have a standard deduction of $27,000 in 2019. The couple would effectively receive no tax savings for the first $12,000 of charitable contributions they make. Even with a $12,000 charitable deduction, total itemized deductions of $27,000 would not exceed their standard deduction.

Taxpayers whose total itemized deductions, other than charitable contributions, equal or exceed the standard deduction (including adjustments for being blind or age 65 or older) generally receive a tax benefit from charitable contributions equal to the income taxes saved. For example, assume that a married couple, both age 65, have total itemized deductions (other than charitable contributions) of $30,000. They would be entitled to a standard deduction of $27,000 in 2019. If they are in the 24% income tax bracket and make a charitable contribution of $10,000, they would reduce their income taxes by $2,400 ($10,000 charitable deduction x 24% tax rate).

However, the amount of your income tax charitable deduction may be limited to certain percentages of your adjusted gross income (AGI). For example, your deduction for gifts to public charities is generally limited to 60% of your AGI for the year, and other gifts to charity are typically limited to 30% or 20% of your AGI. Charitable deductions that exceed the AGI limits may generally be carried over and deducted over the next five years, subject to the income percentage limits in those years.

Year-end tax planning

When making charitable gifts during the year, you should consider them as part of your year-end tax planning. Typically, you have a certain amount of control over the timing of income and expenses. You generally want to time your recognition of income so that it will be taxed at the lowest rate possible, and to time your deductible expenses so they can be claimed in years when you are in a higher tax bracket.

For example, if you expect that you will be in a higher tax bracket next year, it may make sense to wait and make the charitable contribution in January so you can take the deduction next year when the deduction results in a greater tax benefit. Or you might shift the charitable contribution, along with other itemized deductions, into a year when your itemized deductions would be greater than the standard deduction amount. And if the income percentage limits above are a concern in one year, you might consider ways to shift income into that year or shift deductions out of that year, so that a larger charitable deduction is available for that year. A tax professional can help you evaluate your individual tax situation.
Qualified charitable distribution (QCD)

If you are age 70½ or older, you can make tax-free charitable donations directly from your IRAs (other than SEP and SIMPLE IRAs) to a qualified charity. The distribution must be one that would otherwise be taxable to you. You can exclude up to $100,000 of these QCDs from your gross income each year. And if you file a joint return, your spouse (if 70½ or older) can exclude an additional $100,000 of QCDs.

You cannot deduct QCDs as a charitable contribution because the QCD is excluded from your gross income. In order to get a tax benefit from your charitable contribution without this special rule, you would have to itemize deductions, and your charitable deduction could be limited by the percentage of AGI limitations. QCDs may allow you to claim the standard deduction and exclude the QCD from income.

QCDs count toward satisfying any required minimum distributions (RMDs) that you would otherwise have to receive from your IRA, just as if you had received an actual distribution from the plan.

Note: Your QCD cannot be made to a private foundation, donor-advised fund or supporting organization. Further, the gift cannot be made in exchange for a charitable gift annuity or to a charitable remainder trust.

Understand the importance of having a budget

A budget is an important part of managing your finances. Knowing exactly how you are spending your money each month can set you on a path to pursue your financial goals. Start by listing your current monthly income. Next, add up all of your expenses. It may help to divide expenses into two categories: fixed (e.g., housing, food, transportation, student loan payments) and discretionary (e.g., entertainment, vacations). Ideally, you should be spending less than you earn. If not, you need to review your expenses and look for ways to cut down on your spending.

Remember that the most important part of budgeting is sticking to it, so you should monitor your budget regularly and make changes as needed. To help stay on track, try to make budgeting a part of your daily routine and be sure to give yourself an occasional reward (e.g., dinner at a restaurant instead of cooking at home).

Establish an emergency fund

An emergency fund is money set aside to protect yourself in the event of an unexpected financial crisis, such as a job loss or unexpected medical bills. Typically, you will want to have at least three to six months’ worth of living expenses in your cash reserve. Of course, the amount you should save depends on your individual circumstances (e.g., job stability, health status). A good way to establish an emergency fund is to earmark a portion of your paycheck each pay period to help achieve your goal.

Manage your debt situation properly

Whether it’s debt from student loans or credit cards, you’ll want to avoid the pitfalls that sometimes accompany borrowing. To manage your debt situation properly, keep track of your loan balances and interest rates and develop a plan to manage your payments and avoid late fees. If you need help paying off your student loans, consider the following tips:

- Find out if your employer offers some type of student debt assistance
- Contact your lender about your repayment options
- Consider whether loan consolidation or refinancing is available

Maintain good credit

Having good credit will affect so many different aspects of your financial situation, from obtaining a loan to gaining employment. You can establish and maintain a good credit history by avoiding late payments on existing loans and paying down any debt you may have. In addition, you should monitor your credit report on a regular basis for possible errors or signs of fraud or identity theft.
Determine your insurance needs

Insurance might not be the first thing that comes to mind when you think about your finances. However, having the right amount of insurance is an important part of any financial strategy. Your specific insurance needs will depend on your circumstances. For example, if you rent an apartment, you’ll need renters insurance to protect yourself against loss or damage to your personal property. If you own a car, you should have appropriate coverage for that as well. You may also want to evaluate your need for other types of insurance, such as disability and life.

As for health insurance, you have a couple of options. You can usually stay on a parent’s insurance until you turn 26. In addition, you may have access to health insurance through your employer or a government-sponsored health plan, or you can purchase your own plan through the federal or state-based health insurance marketplace. For more information, visit healthcare.gov.

WHAT’S THE REAL RETURN ON YOUR INVESTMENTS?

As an investor, you probably pay attention to nominal return, which is the percentage increase or decrease in the value of an investment over a given period of time, usually expressed as an annual return. However, to estimate actual income or growth potential in order to target financial goals—for example, a certain level of retirement income—it’s important to consider the effects of taxes and inflation. The remaining increase or decrease is your real return.

Let’s say you want to purchase a bank-issued certificate of deposit (CD) because you like the lower risk and fixed interest rate that a CD can offer. Rates on CDs have risen, and you might find a two- or three-year CD that offers as much as 3 percent interest. That could be appealing, but if you’re taxed at the 22 percent federal income tax rate, roughly 0.66 percent will be gobbled up by federal income tax on the interest.

That still leaves an interest rate of 2.34 percent, but you should consider the purchasing power of the interest. Annual inflation was about 2 percent from 2016 to 2018, and the 30-year average was 2.5 percent. After factoring in the effect of inflation, the real return on your CD investment could approach zero and may turn negative if inflation rises. If so, you might lose purchasing power not only on the interest but also on the principal.

This hypothetical example doesn’t represent the performance of any specific investment, but it illustrates the importance of understanding what you’re actually earning after taxes and inflation. In some cases, the lower risk offered by an investment may be appealing enough that you’re willing to accept a low real return. However, pursuing long-term goals such as retirement generally requires having some investments with the potential for higher returns, even if they carry a higher degree of risk.

Note: The FDIC insures CDs and bank savings accounts, which generally provide a fixed rate of return, up to $250,000 per depositor, per insured institution. All investments are subject to risk, including the possible loss of principal. When sold, investments may be worth more or less than their original cost.
