

# SOLVING CHALLENGES IN MANUFACTURING AND DISTRIBUTION USING THE MICROSOFT POWER PLATFORM

December 7, 2023

# Today's presenters

**Simon Chan**

Principal

Power Factory Leader

[simon.chan@rsmus.com](mailto:simon.chan@rsmus.com)

**Mike Lang**

Manager

Power Platform Solution Architect

[Michael.lang@rsmus.com](mailto:Michael.lang@rsmus.com)

**Hardit Bhatia**

Manager

Power Platform Solution Architect

Microsoft MVP, MCT

[hardit.bhatia@rsmus.com](mailto:hardit.bhatia@rsmus.com)

## Agenda

---

Understanding Power Platform components

---

Low-code vs pro-code (fusion development)

---

Power Platform licensing

---

Real-world solutions

# Today

- Business environment is increasingly volatile, uncertain, complex, and unpredictable.
- Businesses need agile, flexible, and quick solutions to adapt to the changing landscapes and resolve their issues promptly.
- Organizations need to scale their operations while staying lean, ensuring that they continue to lead in their respective industries.
- The need is to enable businesses to quickly pivot and adapt to new market conditions, ensuring sustained growth and competitiveness is essential in today's economy.

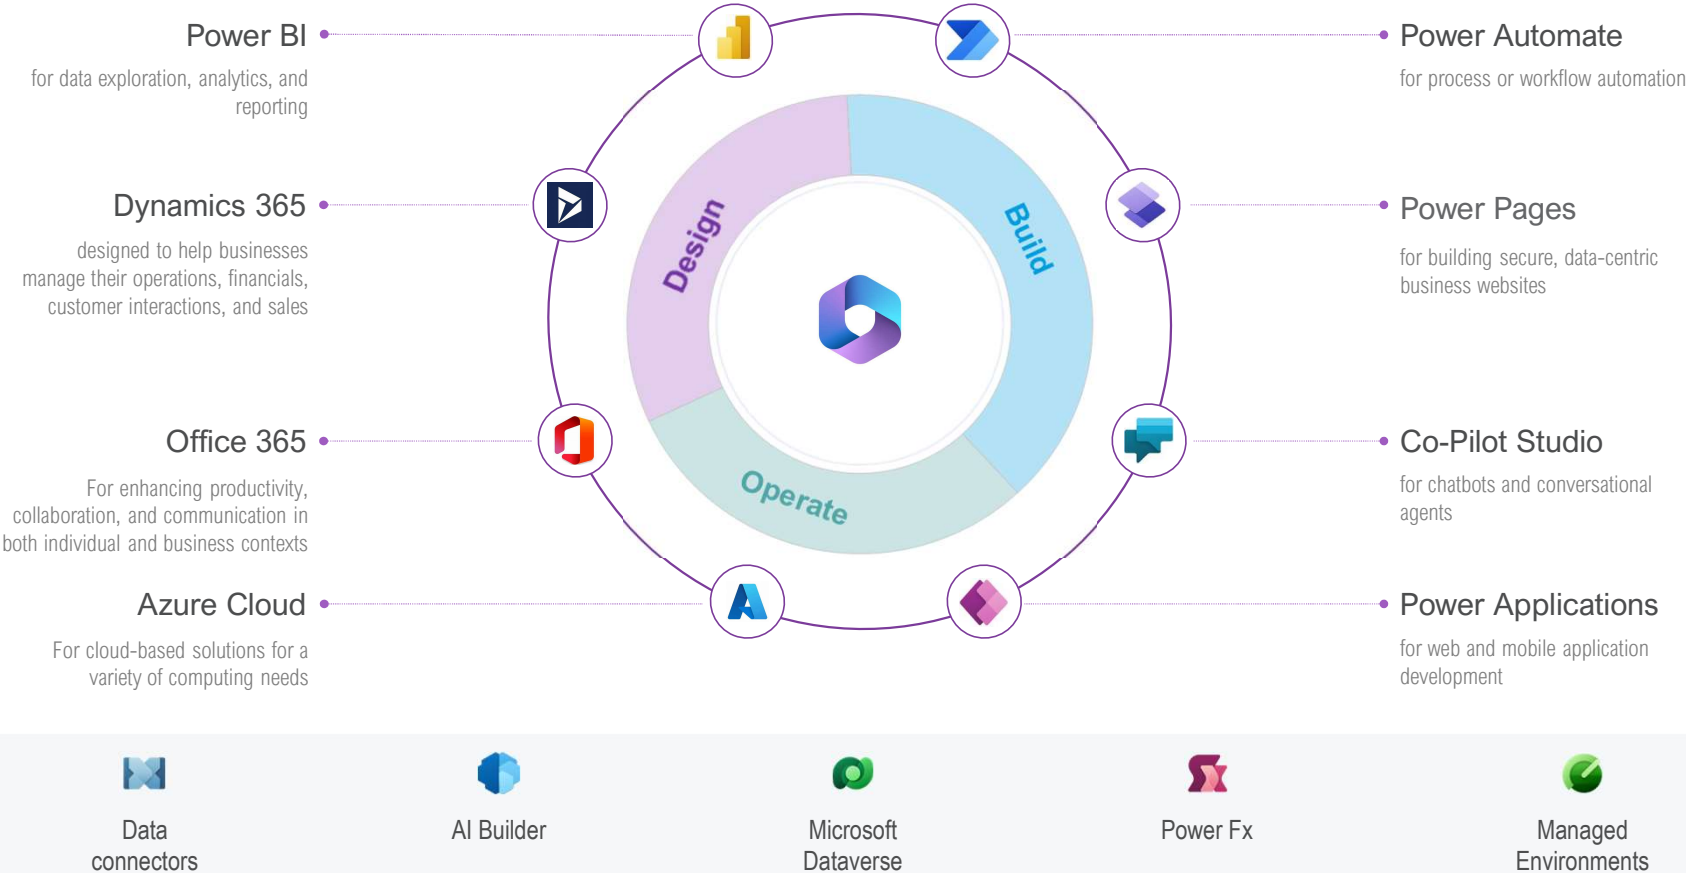

# WHAT IS THE POWER PLATFORM?

## Low-code

Enables organizations to swiftly develop and deploy applications with minimal hand-coding and quick setup and deployment, thereby radically reducing the time and expertise required to release new applications.

# Microsoft Power Platform

# Low-code pros & cons

## PROS

### Rapid development

Low-code platforms allow for quicker application development since they provide pre-built components and visual interfaces, reducing the need for manual coding

### Reduced skill barrier

Developers with limited coding experience can still create functional applications, democratizing the development process within organizations

### Faster iterations

Changes and updates can be made more rapidly due to the visual nature of low-code development, facilitating agile development practices

### Cost-efficient

Low-code development can be more cost-effective, as it requires fewer resources and less time compared to traditional coding

### Easier maintenance

Applications built using low-code platforms might have simplified maintenance, as updates and modifications can be made visually

### Limited customization

Low-code platforms may not accommodate highly specialized or complex requirements, limiting customization options.

### Scalability concerns

As applications become more complex, low-code platforms might struggle to handle scalability and performance requirements.

### Lack of open standards

Users might become reliant on the specific low-code platform and face difficulties migrating to other solutions.

### Less control

Developers might have less control over the underlying code, making it harder to implement certain advanced functionalities.

### Security and compliance

Some low-code platforms could raise security and compliance concerns, especially for sensitive data or industries with strict regulations.

## CONS

# CHOOSING THE RIGHT TOOLS WITH FUSION DEVELOPMENT

Strategic investments and implications of low-code vs code-first and their diffusion over time. Promotion, demotion and obsolescence strategies.

# Fusion development cycle

Provides the following capabilities...

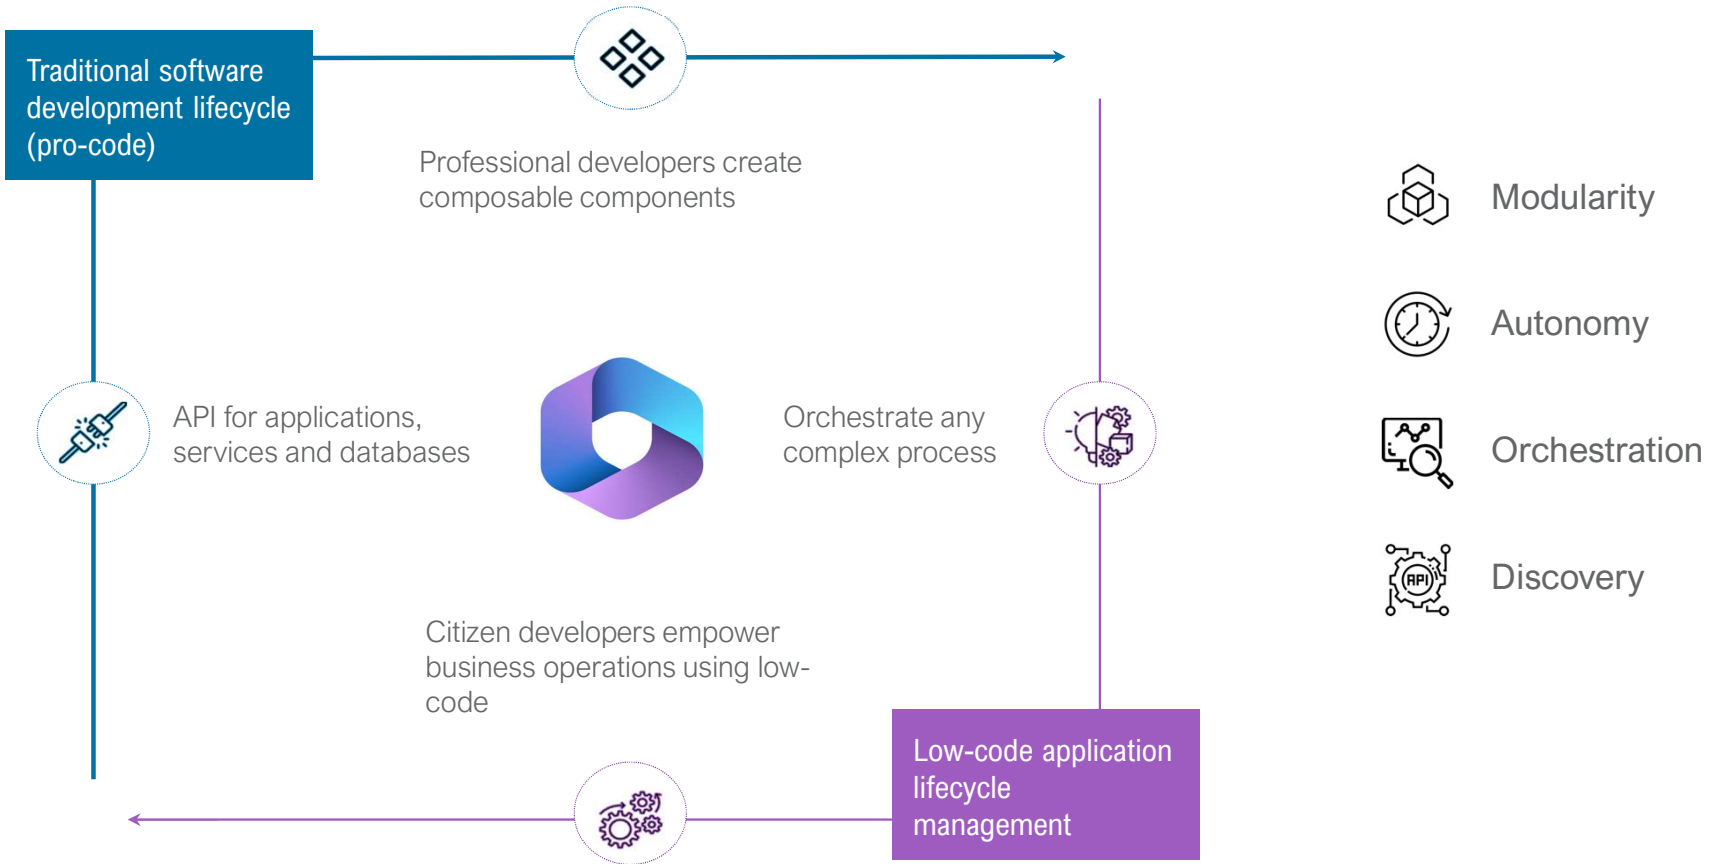

Making the right engineering choices between low code and code first and business apps.

Building complex solutions and platforms using the most efficient proportion of the tools and approaches, delivering best in class solutions at scale.

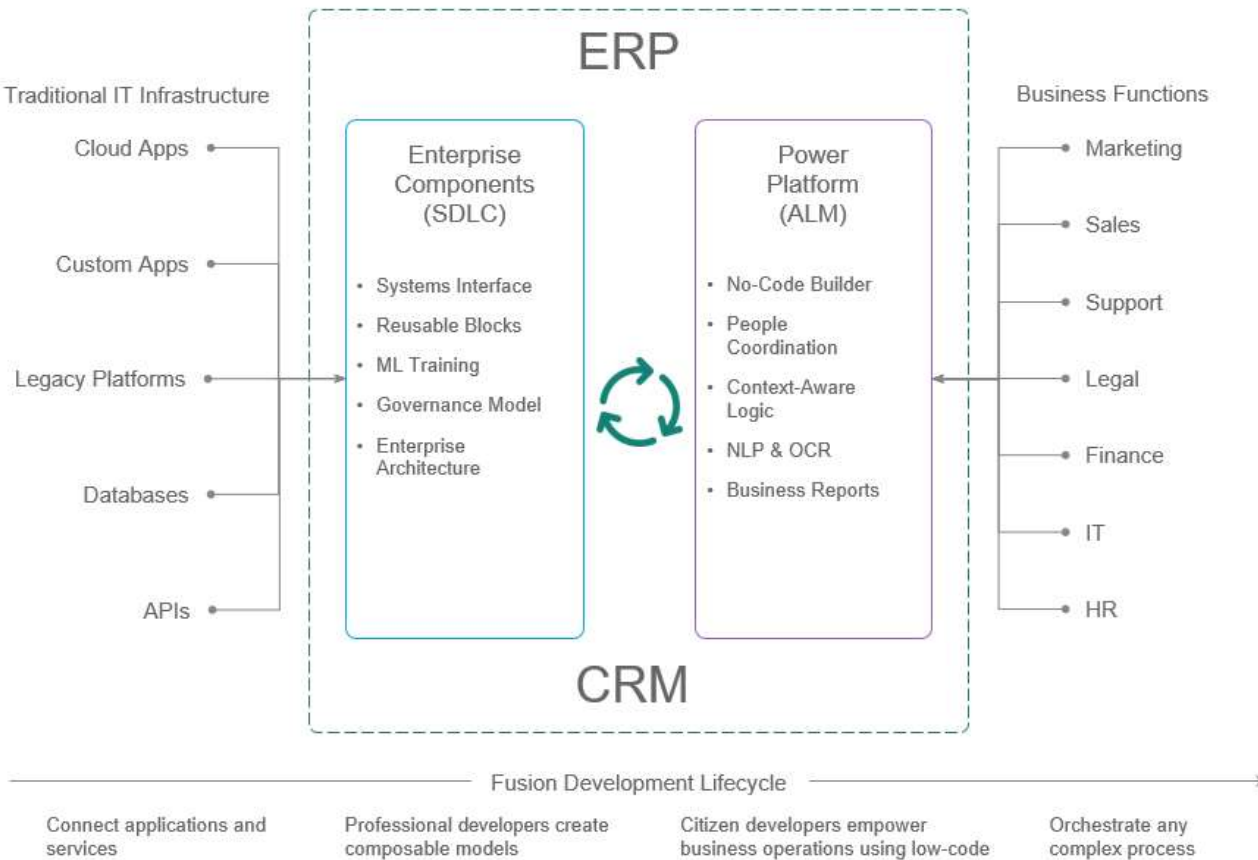

Bridging the gap between siloed service organizations that inherently focused on either low code, code first or first party app as their only tool.

# Composability principles

Digital components infused with AI

# Citizen development

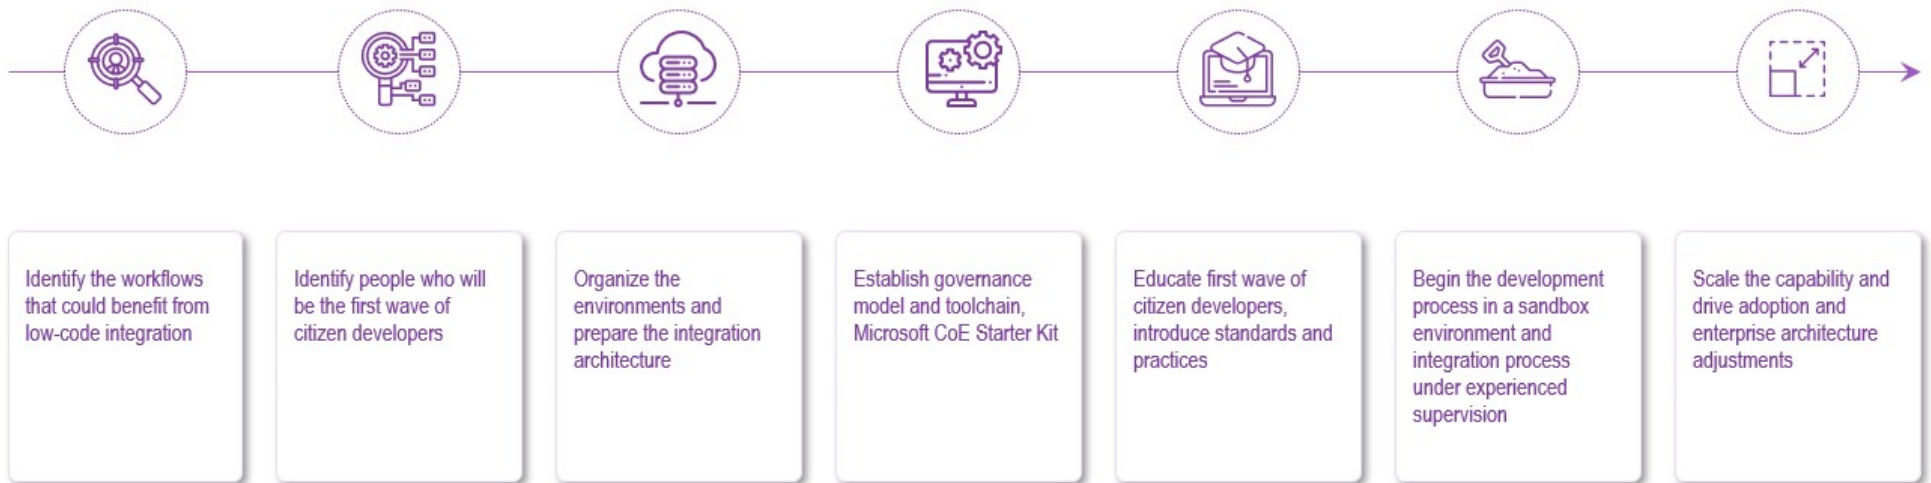

Establishing citizen development practices within the organization begins with the identification of individuals who have long possessed the desire to be technologically creative but have remained dependent on developers and IT teams to solve their technical problems for them.

A typical portrait of a beginner citizen developer includes:

- An analytical background and a general ability to write a formula.
- Deep knowledge of tools as a user; someone who knows how to write a VBScript in Excel won't encounter difficulties in using Power Applications.
- Desire and passion to automate their everyday routines.
- Basic understanding of business workflow notations, such as BPMN.

# How to get started

# LICENSING

# Power Apps licensing summary

## Summary of Power Apps

		Power Apps Subscriptions	Power Apps subscriptions	Power Apps per app pay-as-you-go	Power Apps use rights included with:	
		<b>RECOMMENDED MOTION</b> <b>Power Apps Premium</b> \$20 per user/month (or \$12 per user/month with 2,000+ new per user licenses)	<b>Power Apps per app</b> \$5 per user/month	<b>Power Apps per app meter</b> <sup>1</sup> \$10 per active user/app/month	<u>Select</u> D365 Pro & Enterprise licenses <sup>2</sup>	<u>Select</u> Microsoft 365 and Office 365 licenses
Plans	Capabilities					
Power Apps	Run custom apps	Unlimited apps	1 app <b>or</b> 1 website	1 app	Within same envir. as licensed D365 application(s)	Unlimited
	Run custom websites	Unlimited websites				
	Run workflows within the custom app <sup>3</sup>	● <sup>4</sup>	● <sup>4</sup>	● <sup>4</sup>	● <sup>4</sup>	●
AI Builder	Service credits <sup>5</sup>	500 credits	250 credits			
Power Platform connectors	<u>Standard</u> connectors	●	●	●	●	●
	<u>Premium</u> and <u>custom</u> connectors	●	●	●	●	
	On premises and cloud services data transfer	●	●	●	●	
Dataverse	Full Dataverse access	●	●	●	●	Dataverse for Teams only
	Create and access custom tables <sup>6,7</sup>	●	●	●	Pro limited to 15 per app	
	Dataverse Database capacity (Accrued)	250 MB <sup>8</sup>	50 MB <sup>8</sup>			
	Dataverse File capacity (Accrued)	2 GB <sup>8</sup>	400 MB <sup>8</sup>			
Managed Environments	Admin and governance at scale <sup>9</sup>	●	●		● <sup>4,10</sup>	

# Appendix B: Dynamics 365, Microsoft/Office 365 and Windows licenses that include Power Platform capabilities

## Dynamics 365

Qualifying License	Limited Use Rights Included with Qualifying License		
	Power Apps	Power Automate	Power Pages
Dynamics 365 Sales Premium	○	○	○
Dynamics 365 Sales Enterprise	○	○	○
Dynamics 365 Sales Professional		○	
Dynamics 365 Customer Service Enterprise	○	○	○
Dynamics 365 Customer Service Professional		○	
Dynamics 365 Field Service	○	○	○
Dynamics 365 Project Operations	○	○	○
Dynamics 365 Team Members		○	
Dynamics 365 Finance	○	○	○
Dynamics 365 Supply Chain Management	○	○	○
Dynamics 365 Commerce	○	○	○
Dynamics 365 Human Resources	○	○	○
Dynamics 365 Operations – Activity		○	
Dynamics 365 Business Central	○	○	○
Dynamics 365 Business Central Team Members		○	
Dynamics 365 Intelligent Order Management	○	○	○

## Microsoft 365\*, Office 365, and Windows

Qualifying License	Limited Use Rights Included with Qualifying License				
	Power Apps	Power Automate		Microsoft Copilot Studio for Teams	Dataverse for Teams
		Cloud flows	Desktop flows		
Office 365 E1	○	○		○	○
Office 365 E3	○	○		○	○
Office 365 E5	○	○		○	○
Office 365 F3	○	○		○	○
M365 Business Basic	○	○		○	○
M365 Business Standard	○	○		○	○
M365 Business Premium	○	○	○	○	○
Microsoft 365 F1					
Microsoft 365 F3	○	○	○	○	○
Microsoft 365 E3	○	○	○	○	○

Windows Education A3 <sup>1</sup>			○		
Windows Education A5 <sup>1</sup>			○		

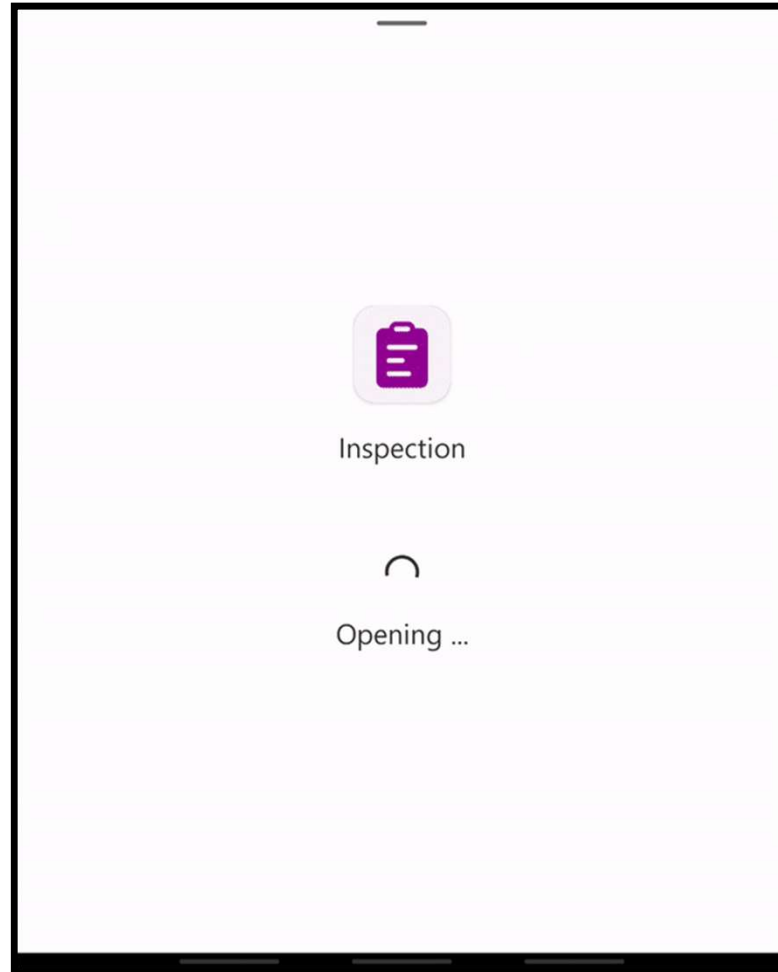

# EXAMPLES FROM THE FIELD

## Inspections and quality

- Manufacturing sites performing inspections on paper
  - No easy way to store inspections from all sites in one repository
  - No easy way to associate pictures with checklist steps
  - No alerts in case of inspection failures
- Third party software
  - Integration to reconcile inspection data with D365 for field service
  - Separate licensing
- Utilized Power Apps and Power Automate

## Inspections and quality (cont.)

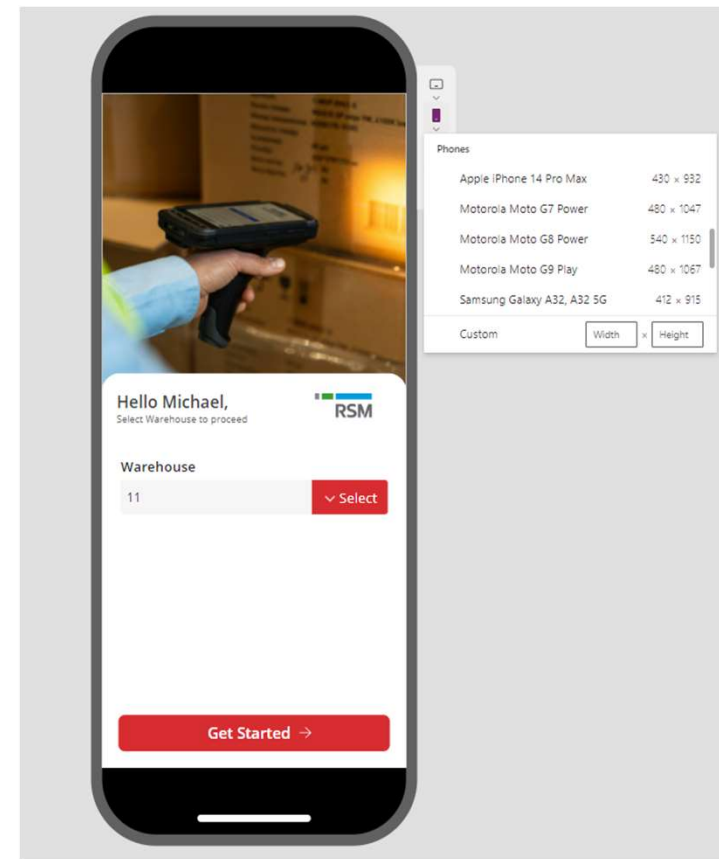

# Simple Warehouse Transaction Mobile App

Warehouse facilities didn't have the capabilities to utilize ERP advanced warehouse features:

- Scan
- Receive
- Count
- Transfer
- Evaluated third party software which required heavy integrations and costly
- Utilized Power Apps and Power Automate

# DCAT – Contract Lifecycle Management

- Lack of visibility and consistency managing vendor onboarding and contracting process
- Built contract lifecycle management (CLM) application
- RSM has multiple systems, processes and legal requirements. We currently use DCAT to manage our contracting processes internally today.

The screenshot displays the Dynamics 365 RSM DCAT interface for a document request. At the top, there's a navigation bar with 'Dynamics 365 | RSM DCAT' and a search bar. Below it is a ribbon with various actions like 'Save', 'Deactivate', 'Refresh', etc. The main content area shows a workflow for 'Internal DCAT Project' with stages: Draft (16 Mo), Review, Packaging, Delivered, and Executed. The 'Draft' stage is currently active. Below the workflow, there are three main sections: 'REQUEST INFORMATION', 'STATUSES', and 'RELATED CUSTOMER'. 'REQUEST INFORMATION' lists fields like Project Name, Account, Client Main Contact, etc. 'STATUSES' shows various status checks like 'Eng. Lead Review Status', 'Regional Approval Status', etc. 'RELATED CUSTOMER' shows details for the customer 'RSM', including account name, prefix, MSA version, and address.

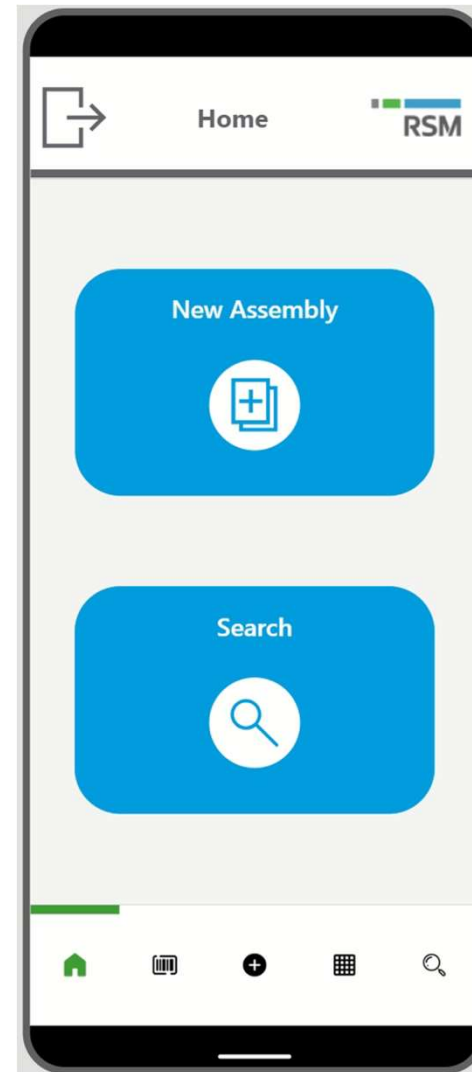

## Serial in a serial

- HVAC manufacturers needed the ability to track serialized inventory within their finished good products to streamline servicing and tracing operations.
- Utilized Power App's to store and visualize this information. This accelerates the product creation and maintenance process by allowing manufacturing workers to instantly update product information.

WRAP UP

# Power Factory offerings

## Architecture Advisory

RSM applies its Enterprise Digital Value Analysis methodology to identify the current state of the enterprise architecture comprised of systems, processes and data.

Based on current enterprise architecture state and architecture decisions RSM will develop a future vision of the architecture based on its foundation composable architecture or completely from scratch if that is the preference.

Based on current and future state of enterprise architecture RSM develops migration roadmap and transition architecture to support it. Transition architecture development if a necessary step to ensure safe and stable IT operations during the migration period and adoption process.

**Time – 8 weeks**

**Deliverables -** Architecture Description documents for Identified EA, Future Vision EA and Transition Architecture and Roadmap

## DevOps Advisory

RSM deploys consultative services provided by experts who guide organizations in adopting DevOps principles and practices.

The advisors' role is to assess, recommend, and implement strategies that enhance the collaboration between software development and operations teams, aiming to streamline the entire software development lifecycle.

Aimed to help organizations achieve more efficient and effective software delivery, leading to quicker time-to-market, improved product quality, higher customer satisfaction, and better alignment between IT operations and business goals.

**Time – 8 weeks**

**Deliverables -** Architecture Description documents for developed DevOps approach, including standards, guidelines and migration/integration roadmap

## Center of Excellence integration pilot

RSM develops a pilot integration project that serves as a controlled and smaller-scale experiment to understand how the Microsoft CoE Starter Kit can be adapted to the organization's unique context and how it can support the governance, processes, and collaboration necessary to harness the full value of Microsoft solutions and services.

The purpose of this pilot is to establish a base for the organization's center of excellence, which is a centralized function within a business that leads innovation, best practices, and knowledge sharing around Microsoft technologies.

**Time – 8 weeks**

**Deliverables -** Integrated CoE Starter Kit environment alongside with comprehensive set of the documentation with guidelines, practices and production roadmap

## DevOps integration pilot

Based on the developed architecture and selected toolchain RSM builds an environment to test and demonstrate the feasibility of the developed approach. RSM conducts a trial run on as a proof of concept in which DevOps practices are implemented within an organization on a small scale before a full-scale rollout.

The purpose of this pilot is to demonstrate the benefits of DevOps in a controlled environment, with the following objectives:

**Time – 8 weeks**

**Deliverables -** Established environment with integrated DevOps tools, processes and practices alongside with the documentation required to operate it.

## Application Development

RSM engages into the collaboration with the key stakeholders to identify and prioritize the development features and define MVP scope.

RSM deployment its engineering capabilities to organize the development effort and produce all necessary components and integrations that are part of the identified MVP.

RSM delivers identified MVP scope in agile manner for rapid feedback cycles making sure that nothing important is missing or require rebuild or redesign based on user feedback. In the end of the project RSM delivers the created solution by deploying on the appointed environment alongside with all technical and user related documentation.

**Time – 12-16 weeks**

**Deliverables -** Integrated application development prototype (MVP) alongside with all the technical and user documentation
