

Empower your campus with secure AI

Copilot for Microsoft 365 | Secure adoption and workshop

From admissions and advancement to research administration, Microsoft Copilot helps faculty and staff work faster across Microsoft 365. RSM guides secure, FERPA-aware adoption that scales across your schools, colleges and departments.

A structured, three-phase framework

INSPIRE

A scoping session and “Art of the Possible” workshop bring Copilot to life, with day-in-the-life scenarios for up to three areas—e.g., student services, research administration and advancement.

ASSESS

A zero trust review of SharePoint, OneDrive and tenant sharing safeguards FERPA-protected and research data. Includes an acceptable-use policy template and a pilot for up to 60 users.

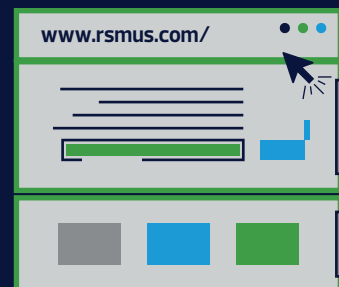

IMPLEMENT

Conditional access and sensitivity labels, up to 5 use-case sessions and up to 16 training sessions across 6 agendas—plus free Copilot Studio and Agentic AI workshops.

What your organization gains

- Accelerate grant and research administration
- Boost faculty and staff productivity
- Govern data with zero trust architecture
- Safeguard FERPA-protected student records
- Scale AI across schools and departments
- Build internal AI champions

DESIGNED FOR Colleges and universities

Empower faculty, researchers and staff with AI while safeguarding FERPA-protected student and research data.
